In Which TAAA Patient Is A Sandwich Graft The Best Option: Advantages, Disadvantages And Limitations

Armando C Lobato, MD, PhD

São Paulo Vascular & Endovascular Institute (CVE-SP), São Paulo, Brazil

- Previous EVAR/TEVAR
- Urgent Setting (rupture, rapid grown & aneurysm size ≥ 70mm)
- Type B Aortic Dissection With Narrowed TL
- Very Tortuous TAAA at Visceral Level

Nothing to Disclose

Sandwich Graft Is The Best Option

Parallel Endografts Limitations:

- Previous EVAR/TEVAR
- Urgent Setting (rupture, rapid grown & aneurysm size ≥ 70mm)
- Type B Aortic Dissection With Narrowed TL
- Very Tortuous TAAA at Visceral Level

Sandwich Graft Is The Best Option

Previous EVAR/TEVAR

Urgent Setting (rupture, rapid grown & aneurysm size ≥ 70mm)
Urgent Setting (rupture, rapid growth, and aneurysm size ≥ 70mm)

Type B Aortic Dissection With Narrowed TL

Very Tortuous TAAA at Visceral Level
Very Tortuous TAAA at Visceral Level

Debranching

All Together

Narrow TL

BMS Overlapping

The Visceral Ostium

Celiac Trunk
SMA
RRA with antegrade flow
LRA with retrograde flow
Sandwich

Parallel Endografts Limitations:

- A few number of publications
- Long-term follow-up is missing
- It is not a standardized procedure
- Type I endoleak
Bilateral internal mammary-coronary bypass
Crossover Fem-Fem bypass
SCA extra-anatomic bypass
Polygonal circle of Willis incomplete
Bilateral hypogastric artery occlusion
Shaggy aorta and supra-aortic vessels
Concomitant aortic arch aneurysm
Type 3 aortic arch associated with LSCA occlusion

Conclusions
The Sandwich Technique facilitates safe and effective aneurysm exclusion and target vessel revascularization in adverse anatomical scenarios, with sustained durability in midterm follow-up.

Sandwich Graft is The Best Option
Parallel Endografts Limitations:
