Gate Cannulation
- Is it an issue worth talking about?

Relationship between access side used to deliver the main body of bifurcated prostheses for endovascular aneurysm repair and speed of cannulation of the contralateral limb
Wilfred Dang, BHSc, Michael Kilian, BHSc, Mark D. Peterson, MD, PhD, FRCSC, Claudio Cina, MD, FRCSC

"Mean cannulation time was shorter when the main body of the bifurcated prosthesis was delivered through the left femoral artery (9.3 ± 5.8 minutes vs 15.4 ± 7.2 minutes, P < .0001)"

Ruptured Abdominal Aortic Aneurysm: Endovascular Repair is Feasible in 40% of Patients
M. Reichart\textsuperscript{a}, R.H. Geelkerken\textsuperscript{b}, A.B. Huisman\textsuperscript{b}, R.J. van Det\textsuperscript{a}, P. de Smit\textsuperscript{a}, E.Ph. Volker\textsuperscript{b}

.....in 16% of our elective EVAR procedures the cannulation time exceeds 20 min....

- EJVES 2003
Where are we?

- IP is protected (US patent pending)
- Prototypes are being tested
- Just for difficult anatomy?
- Just for ruptures?
- All grafts?

Conclusion

I always do it in less than 10 seconds!
