Rapid Eye Movement Exam #6

Choice:
A. TPA
B. Nothing
C. Angiojet
D. Embolectomy Catheter

What is the access principal here?

Catheter Tip Designs

A. STEP
B. SPLIT
C. SIDE-BY-SIDE
D. TWO TIPS
MEGA-atrium

Pick the correct catheter?

SMALL GLOBULAR ATRIUM

SIDE-BY-SIDE TIP IS ONLY EFFECTIVE CATHETER TO USE IN THIS SETTING

FAILURE MODE?

PREVIOUS CATHETER

SUBCLAVIAN VEIN

What are the options?

BP 210/120

How to manage this?

FIGURE THIS OUT!

OCCLUDED SVC

CEPHALIC-FOEMORAL BYPASS

What is the access principle here?
A.) Hero
B.) Catheter
C.) Stent

What now?
BP DROP

What to do?

Operative options?

Tip placement?
HERO + PACEMAKER/DEFIB.

Pick the correct device?

FISTULA REVISION
FISTULA ANASTOMOSIS!
CASE 9 - Long stricture in first stage basilic fistula

Introduction: Patient presented ten weeks status-post first stage BVT for planned second stage. Two prior BAM procedures up to 8mm PTA had been performed.

Issue/Complication: Long high grade stricture in axilla.

Management: Placement of large 9 x 10mm stent graft in the stricture followed by transposition.

Educational Points: If PTA fail with distal fistula stricture, stent grafts can be used if flow and size of proximal fistula are satisfactory. Upper graft can be done percutaneous as tabulated.

56 year old Caucasian female with past medical history of transplant surgery presents a creatine level of 3 and has symptoms of steal syndrome.
