Fenestrated Iliac Limbs To Preserve Hypogastric Flow When IBDs Won’t Work: How To Obtain Them Or Make Them

Afshin Assadian
Department of Vascular and Endovascular Surgery
Wilhelmsunspital Vienna, Austria

Disclosure
- Proctoring for Terumo Aortic
Conclusion

Fenestrated iliac limbs are a good tool to preserve hypogastric blood flow when iliac branched devices do not fit anatomically.
### Conclusion

- Fenestrated iliac limbs are a good tool to preserve hypogastric blood flow when iliac branched devices do not fit anatomically.

- Unfortunately not off-the-shelf devices with waiting times of around 4 weeks.
