Vascular Telecare to Enhance Outcome and Follow-up: NOW and the FUTURE

John (Jeb) Hallett, MD, FACS
Clinical Professor of Surgery
Senior Consultant in Telehealth

Disclosures

I am bullish on TELECARE.

Telecare will be as important as endovascular care

Why?
• Patients want easier access
• Doctors should not be driving all over the place to see patients
• Tele-technologies can monitor and remind patients to what they need to do

Where is vascular telecare NOW?

What do you need to start?
It takes a timeline and a team!

Where have we progressed?

First US Telehealth Center of Excellence

The Future is near!

Suddenly everyone likes it!!!

Just remember this....

- Tele-technologies will be more important going forward
- The technology and $$ are HERE today
- Adoption takes a commitment, a system and teamwork
So get going.. take a swing at it!
