“The opinions presented here are based in author personal experience and are not proposed by the company COOK IFU.”
Aortic Coarctation and Aneurysm Degeneration as a complication of Chronic Type B Dissection,

What is the best therapeutic option?

T-T is very effective and secure

T-T is very effective but ADVANCE THE DEVICE CAREFULLY
Aortic Coarctation and Aneurysm Degeneration as a complication of Chronic Type B Dissection,

What to do and what not to do!

1. Get a high quality CT Scan.
2. Preferable simultaneous access.
3. Understand your limits.
4. Usually it has a small path.
5. Act as a SFA angioplasty: “Push and Go.”
6. Use glide wires and catheters.
7. If you go tough, dilate it progressively with dedicated balloons.
8. Whenever possible stage it.
9. Accept that GOOD is enough!!
10. Needles, Scissors, Wires all those more aggressive maneuvers are risky!! And are safer if done under IVUS.

THANK YOU FOR YOUR KIND ATTENTION
HOPE TO SEE YOU ALL, NEXT YEAR IN RIO
